After 10 years of heading up POS Bio-Sciences (formerly POS Pilot Plant), President & CEO Robert E. Morgan has retired. During his tenure at POS he spearheaded the company's successful transition from a partially grant-funded not-for-profit corporation, into a self-sufficient standalone business. In fact, 2009-2010 was the most successful year ever since POS commenced operations over 33 years ago. At his departure in September he left POS in a strong position for continuing success and growth, along with a new name to reflect the company's expanded capabilities.

"My thanks go out to the POS Board of Directors," says Morgan. "Their support and guidance over the years has been vital to the stability and growth of the company. I would also like to express my gratitude to our clients from around the world. It has been a privilege to meet you, and assist in your pursuit of innovative products. Finally, I would like to express my thanks to POS staff. They have been the momentum behind POS success over my tenure. I am confident they will continue to consistently deliver excellent and innovative performance in the journey ahead!"

To accompany the name change, POS has developed a new website containing several short videos of the facility. They may be viewed at [www.pos.ca](http://www.pos.ca)
